

WHAT IS CLAIMED IS:

1. A liquid crystal display device, comprising:

optical sheets included in a backlight assembly;

a main frame mounted with the backlight assembly; and

at least one shaft member installed at the main frame to fix the optical sheets.
2. The liquid crystal display device as claimed in claim 1, wherein each of the optical sheets is provided with a hole through which the shaft member passes.
3. The liquid crystal display device as claimed in claim 1, wherein the main frame is provided with at least one stepped hole in which the shaft member is provided.
4. The liquid crystal display device as claimed in claim 1, further comprising:

a panel guide for surrounding the backlight assembly and the main frame; and

at least one silicon pad provided between the main panel guide and the main frame.
5. The liquid crystal display device as claimed in claim 4, wherein the silicon pad is

provided with a hole through which the shaft member passes.

6. A liquid crystal display device, comprising:

a main frame;

a backlight assembly, mounted in the main frame;

at least one shaft connected to said main frame;

optical sheets included in the backlight assembly having holes therein configured to
affix to the shaft.
